BODY BAGS FOR BURIAL AND HEAVY DUTY TRANSPORT AND EXHUMATION BODY BAGS

4000 BODY BAG FOR BURIALS

The bag is three-dimensional and welded at all sides. It is made from PVC foil and has a zipper which starts from the upper side, passes the entire right side and ends at the tower half. On the upper side there is a transparent window, 580x445mm, also welded to the upper foil. The bag has ten angles, six at the top, four at the bottom, making it 400 mm high at the upper side, and 200 mm at the iower side. The angles, that is, the hight of the bag and the position of the zipper enable an easier placing of the deceased and zipping as well.

The bag has six angles at the top

The zipper

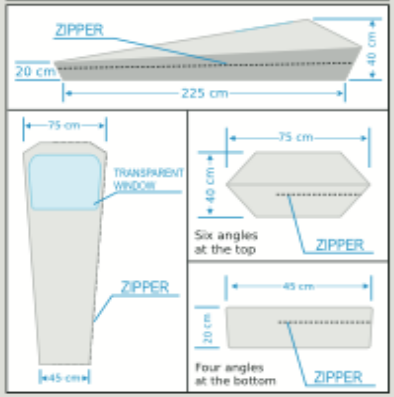

The bag is packed in a PP bag

On the upper side there is a welded transparent window 580x445 mm

TECHNICAL FEATURES

4001 HEAVY DUTY TRANSPORT AND EXHUMATION BODY BAG WITH HANDLES

Transport / exhumation body bag is black, two-dimensional bag, double-seamed at the edges, made from PVC foil. It has a zipper on the upper surface, which passes through 3/4 of the upper surface, enabling an easier placing of the deceased. the bag is particularly reinforced with four straps, transverse-welded to the bottom surface. The straps are 60 mm wide and made of three layers of foil. The bag has handles for carrying, two on the left and two on the right side. Handles are also three-layer straps welded to the bottom surface of the bag and an integral part of bottom reinforcement. On the upper side of the bag there is a transparent pocket for documents.

The zipper passes accross 3/4 of the upper surface

Wider straps / extra reinforcement at the bottom

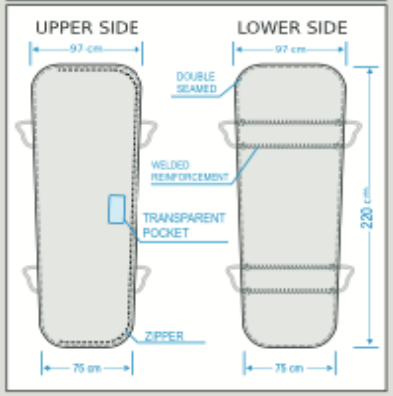

Extra reniforcement at the joints

A reinforced bottom with four welded, three-layer straps, serving also as handles.
